

## **CSTT is the ecological solution for stabilization of clay soil**

**CSTT is a natural vegetable oil that is capable of treating and stabilizing clay soil by modifying its ionic properties.**

**By forming a hydrophobic layer around the clay particles, the soil becomes resistant to water and hence very stable.**

### **Major reductions in the cost of construction**

- **Prevent the absorption & penetration of water**
- **Improve the density and compaction of the soil**
- **Reduce dusting up to 75%**
- **Simple and efficient method of application**
- **Treat the soil permanently & ecologically**
- **Improve the workability of the soil**
- **Increase the shear strength of the soil**
- **Reduce the consumption and loss of gravel**

**CSTT is the economical solution  
to permanently stabilizing clay soil through  
different applications**
